

Enacting Cycles of Improvement: Engineering Excellence

Frankie Jones, Ph.D.
Faculty, Mary Ann Remick Leadership Program
Coordinator of Teaching & Learning, Notre Dame ACE Academies

Carissa Maddox
Regional Director, Indianapolis Notre Dame ACE Academies

Who's In the Room?

Turn & Talk

- Have you ever been part of an initiative for improvement that faded or failed?
- Have you ever experienced a sense of initiative overload?
- When change initiatives have stayed the course - what was different about them? What enabled success?

Improving Teaching & Learning

- Shape the conditions for all to learn on a consistent basis (DuFour & Fullan, 2013)
- Engage in interactions that focus on effective instruction and create conditions for collaborative learning (Grissom and Desimone, 2011)
- Increase professional capital of teachers (Hargreaves & Fullan, 2012)
- Focus on collaborative cultures and capacity building (DuFour & Fullan, 2013; Leithwood & Louis, 2012)

WE HAVE TO CHANGE THE WAY PEOPLE WORK TOGETHER

Focus for Improvement in Practice

Traditional Paradigm

Set Expectation for Each Teacher

(Maybe have a PD or faculty meeting about it)

Monitor Compliance

Express Frustration
"They *KNOW* it's the expectation."

Nothing changes for students.

A New Way

Build Shared Rationale as a Collective

Build Capacity in Increments

Collectively Commit and Monitor

Celebrate wins and diagnose next steps
"We know where to go next."

Student learning improves.

MTSS for Adult Learning

Cycles for Continuous Growth (A New Way Forward)

- **The What**
 - Your north star (instructional framework, vision, annual goals)
 - Adult learning plan progression
- **The How**
 - Incremental cycles of capacity-building

To maintain focus, leaders must attain
“piercing clarity” regarding their selected
priorities and their absolute primacy.

(Collins, 2005, p. 17)

Quote on initiative fatigue

Decomposing Practice: Adult Learning Progressions

*How does adult learning
gradually and intentionally
build collective capacity
toward our goal?*

**Focus for
Improvement in
Practice:**
Teachers elicit and
respond to student
thinking through
lessons.

Decomposing Practice

Decomposition of practice entails identifying essential elements of practice for the purposes of teaching and learning in professional education (Grossman et al., 2009)

Efforts to decompose practice assume that practice is complex, contextual, and responsive while also involving some more predictable, learnable aspects (Lampert & Graziani, 2009).

Decompositions of practice can inform decisions about how to articulate expectations for practice, unpack examples of practice so that learners “see” what matters, provide feedback as learners engage in practice, and assess effectiveness of learning experiences (Grossman, 2018; McDonald et al., 2013; Reisman et al., 2018)

Decomposing Practice Example

Teachers elicit and respond to student thinking through lessons.

- Planning general, open-ended rigorous questions
- Using repetition, scaffolded prompts, and processing time when posing questions
- Allowing productive think time
- Ensuring full participation in the thinking/production of responses
- Utilizing strategies to maximize voice in sharing of responses.
- Circulating and noticing student production.
- Paying close attention to what students say, without unnecessary interruptions and focusing on ideas rather than academic language.
- Capturing important information for future instruction.
- Noticing specific features of the student's thinking: common patterns, strengths, novel ideas, areas of particular interest or engagement, weaknesses, and errors.
- Allowing students to communicate in their preferred mode (e.g. drawing, writing, speaking, etc)
- Developing responsive questions and probes based on knowledge of students and students' ideas
- Identifying elements of the student's thinking that he or she has said little about, and probing further
- Identifying particularly interesting or confusing (to the teacher) aspects of the student's thinking and developing corresponding questions or prompts

Collaborative At-Bat

- As a group, brainstorm the component pieces of explicit instruction.

What do teachers need to know and do in order to deliver impactful explicit instruction?

Explicit Instruction

- Establish the purpose and relevance of the strategy, skill, content, and/or task.
 - Explain the authentic context in which the knowledge and skills are used.
 - Connect to prior knowledge and students' lived experiences.
- Models how the skill, strategy or task is completed.
 - Selection of content (problem/text)
 - Accurate representation of content (accuracy, disciplinary vocabulary)
 - Think aloud (metacognition) to give windows into expert's thinking and decision-making
 - Highlights likely misconceptions or errors
- Use strategies to engage students during the model (notecatchers for example)

Processing Pause

- Think of one practice you would love for your faculty to get better at together.
- Briefly brainstorm some of the key components of that practice.

What do teachers need to know and do in order to _____?

Cycles for Continuous Growth (A New Way Forward)

Incremental Steps

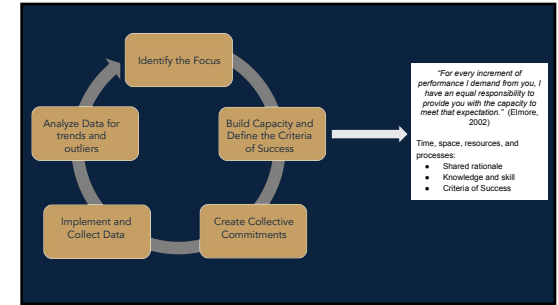

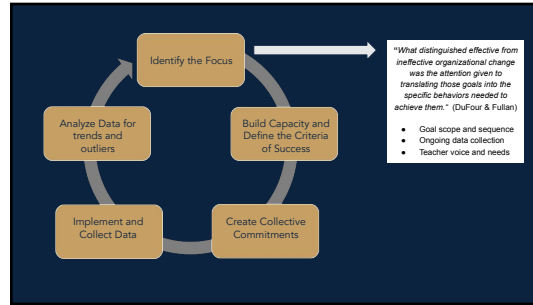

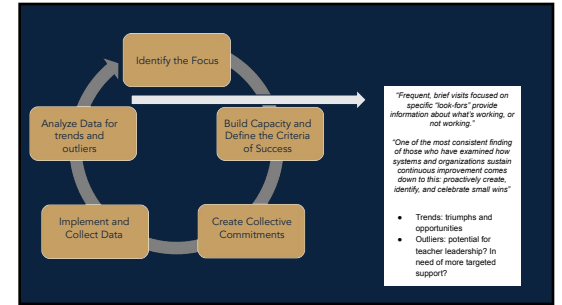

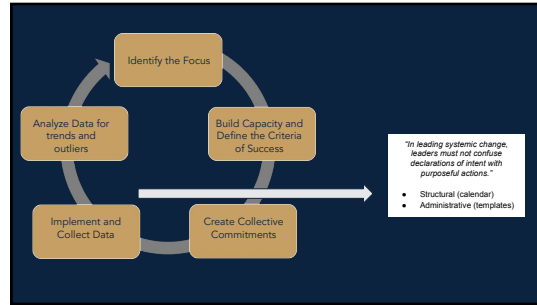

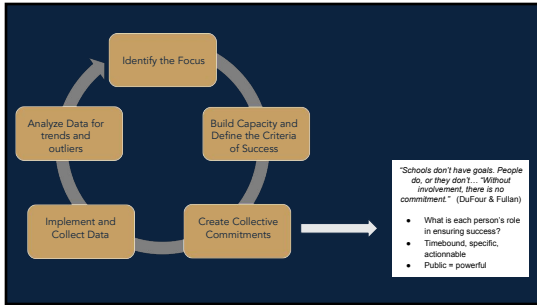

"Learning together is the work."

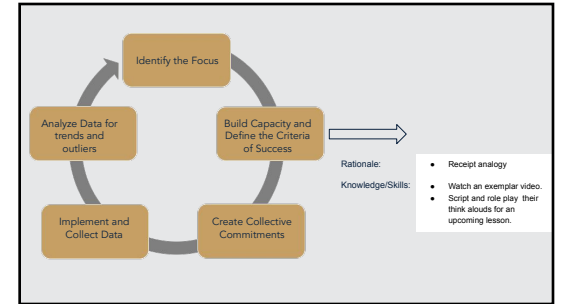

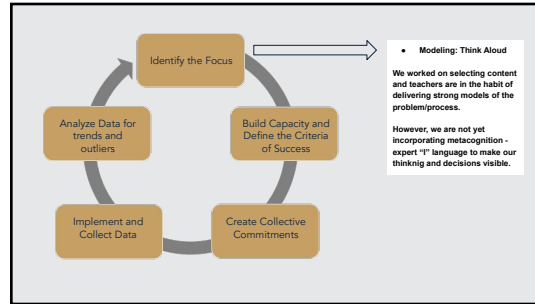

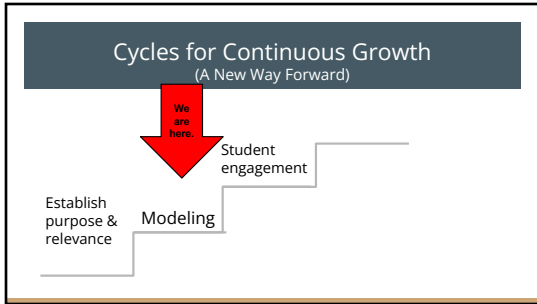

Michael Fullan

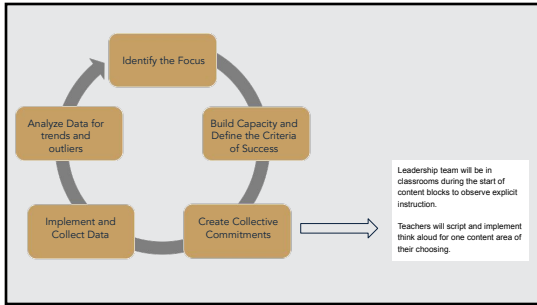

This collaborative cycle is not a program but rather a **sustained approach** to develop the **collective capacity** of educators to meet the needs of all students in an ever-changing society.

It not only supports ongoing adult formation, but it does so in a manner that **intentionally invites teacher voice and engagement** into the process.

Modeling During Explicit Instruction Observation 9.6.9.13 by Indicator	
Selection of content / problems / text is appropriate for the model	100.00%
Accurate representation of content (accuracy, disciplinary vocabulary)	80.00%
Think aloud (metacognition) to give windows into expert's thinking and decision-making	93.33%
Highlights likely misconceptions or errors	26.67%

Modeling By Teacher	
K	3/4
1	3/4
2	3/4
3	1/4
4	3/4
5	1/6
6	3/54
7	4/4
8	4/4

Nearly all teachers (95%) used expert think alouds across observations. However, we only observed one teacher explicitly highlighting common errors or misconceptions. This is where we need to go next.
Additionally, my 3rd grade teacher needs additional support.

Processing Pause

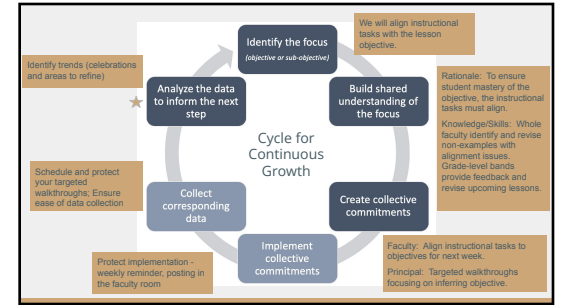

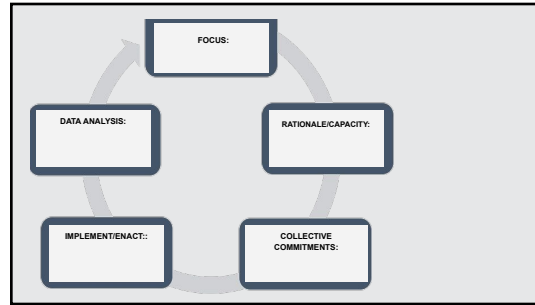

- What about the cycle as a whole, or which particular pieces of the cycle, resonate with you? Excite you?
- What about the cycle as a whole, or which particular pieces of the cycle, are you unsure about?
- Which aspects of the cycle do you already do in your practice? How might connecting those to other aspects within the cycle amplify their impact?

Positive Cycology

- This process is intentionally, and unavoidably, iterative. Just G-O-GO!
- Start safe.
- Find a cycling partner.
- Be specific when it comes to commitments - What will we do? What will we look for?
- Celebrate inch pebbles, don't just keep plowing ahead to the next milestone.

Take the cycle for a spin!

Plan Your 1st Cycle

Resources for Capacity Building/CoS

Sample Tools for Data Collection

Present What is the evidence?	Criteria of Success	Not Evident/Observed
	Lesson Plan/Daily Schedule includes independent reading every day.	
	Student choice is evident.	
	Teacher has a system for taking notes about independent reading conferences and student progress.	
	Planned mini-lesson on reading strategy prior to independent reading time 1-3 days.	
	Mini-lesson includes explicit teaching of reading strategies and behaviors, with think-alouds.	
	During independent reading, teacher circulates while students are engaged in reading.	
	Teacher conferences with students about their independent reading with evidence of research, compliment, coaching, link/planning.	
	There is a clear closure and synthesis at the end of independent reading.	

Threshold:
85% of teachers implementing 90% of CoS most of the time.

Sample Tools for Data Collection

	3	4	5
Expectations are decomposed into step-by-step moves	Yes	Yes	Yes
Expectations are communicated orally (each time) and visually (at the initial teach)	No visual	Yes, both	Yes, both
Teacher is present - scanning and circulating to monitor meeting of expectations	At desk	Yes	In hall
Teacher praises students by name with specific language of the expectations.	Praise w/o naming	No	Praise w/o naming
Teacher uses least-invasive redirection to address students not meeting expectations.	N/A	Yes	No - raised voice

THANK YOU!
